

**NEIWPC TR-16 Guides for the Design of Wastewater Treatment Works—
Revised 2011 Edition**

NEIWPC has revised its design guide for wastewater facilities to reflect the need to recover from and operate during flooding, power outages, and other extreme-weather emergencies. Technical Report (TR) 16, Guides for the Design of Wastewater Treatment Works, now defines critical equipment and offers guidance on backup-power, flood-elevation and related design considerations, and levels of protection for new equipment. The guide now includes new and revised design considerations and expanded discussions of flooding as an emergency condition and as a consideration when siting wastewater-treatment facilities. The additions were ordered by NEIWPC's governing Commission in 2014 in the wake of Hurricanes Sandy and Irene and the February, 2013, northeaster. The revisions affect several chapters to the fourth (2011) edition, called the Revised 2011 Edition. For more information, or to order, please visit this [web page about TR-16](#). The new version is available in hard copy manual or CD.

Price: **\$95.00** per copy (hardcopy) or **\$25.00** (CD)
Includes shipping & handling (US Media Mail)

To order, indicate hard copy and/or CD below and quantity desired. Return this form with required payment to the address below. Please allow 1-2 weeks for delivery.
